DRIFT TRACER ★only need Vx★

- set to 30 s
- starts @ station 300 cm (drop balls in) ⟶ gets caught @ station -60 cm
- 240 cm long + 1' wide = 30.48 cm
- weir located @ station -30
- water is level
- depth is smaller @ start compared to end

depth = 16 cm @ start

depth @ weir = 9.25" = 23.5 cm

33.49 mm is depth @ end

276 mm

69.70 cm = depth @ end (went up)

- moved Flowtracker to Station 200
- height of 13.5 cm @ 59%
  - .85 = velocity (x-direction)
  - .1 velocity in y-direction

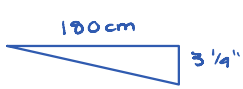
Vx = 0.73 ft/s Vy = -.02 Vz = -.07

depth = 22.5 cm @ Station 210 cm

height of instrument = 13.5 cm

Slope of open channel

l = 100 cm h = 3 1/4"



@ Station -330 cm

5 3/4" → height of water

63% → height of instrument

Vx = 1.29 Vy = 0.18 Vz = 0.2

@ Station -270 cm

Vx = 0.93 Vy = .13 Vz = 0.04

height = 4" = of instrument

height of water = 7.5"

Vx = 0.98
